

Generic AI is not designed for the SCT process.

A helpful-sounding answer can still leave a self-represented person less prepared.

How might GenAI become a responsible preparation tool—not an unreliable shortcut?

WHERE GENERIC AI CAN GO WRONG

01

Important gaps stay hidden

Relevant facts or supporting documents may never be surfaced.

02

Assumptions get reinforced

The system may agree with the user instead of testing their account.

03

Confident errors feel credible

Hallucinated or outdated information can sound authoritative.

Imagine this was your grandmother.

An elderly Mandarin-speaking woman sees “S\$30 haircut for women”—and says she was pressured into an upgraded package.

THE CLAIMANT

She was Chinese-educated, spoke primarily Mandarin and understood very little English.

PURPOSE

Obtain a simple haircut

SETTING

A neighbourhood outlet in Toa Payoh

HER ACCOUNT

She felt “pressured”, “frightened” and “afraid”

01

What she expected

A simple women’s haircut advertised at S\$30.

02

What she was told

The consultants initially represented that a basic haircut package would cost S\$30.

03

What she was charged

After the service, the store charged S\$100 for an upgraded haircut, hairwash and treatment package.

04

What happened next

Her daughter said she had been “scammed”. She sought a refund the next day, then approached the police, CASE and the SCT.

The question

How do we translate “I was pressured” into a cause of action?

From a story to an organised case.

Andrea turns an overwhelming account into a sequence the user can work through.

It does not begin with “Do I have a case?”

Responsible by design.

Grounded. Proportionate. Transparent.
Together, they form Andrea's "GPT".

G

Grounded

START WITH RELIABLE INPUTS

Official Legal Sources

The user's own account

User-provided documents and evidence

P

Proportionate

TEST, DO NOT SIMPLY AGREE

What supports this?

What is still missing?

What might the other side say?

T

Transparent

SHOW THE STATUS OF EACH CLAIM

FACT provided by the user

EVIDENCE supported by a document

POSSIBILITY requires verification

*"When it doesn't know, it doesn't
guess."*

Andrea gets curious before it gets confident.

“I was pressured into buying this.”

ANDREA ASKS WHAT HAPPENED

- 1 What did you originally go there for?
- 2 What price did you expect?
- 3 What were you told?
- 4 What exactly made you feel pressured?

* This list is non exhaustive and adaptable to various factual matrices.

Broad conclusions become specific, examinable facts.

Andrea tests both sides.

The goal is not the strongest possible story. It is a story the user understands—including how it may be challenged.

THE USER'S ACCOUNT

"I was pressured."

- What supports this account?
- What evidence exists?
- Which details are still uncertain?

THE RESPONDENT'S ACCOUNT

What might they argue?

"You voluntarily agreed to the transaction."

ANDREA TESTS THE GAP

Was the price explained?

Did you sign anything?

Could you refuse?

What happened after you asked for a refund?

A reality-check against assumptions—not an argument generator.

Prepare the person. Organise the case.

FROM

“Tell AI my problem.”

ANDREA INSIDE THE ASSISTANT PEOPLE ALREADY USE

ChatGPT + remote MCP

CONNECTED

REMOTE MCP SERVER One guarded workflow, available from any compatible AI application.

A companion for the person behind the claim.

Less overwhelm. Better organised facts. A clearer path into the official process.

EMPATHY FOR THE USER

Guide your aunty—not just her documents.

Plain language, patient questions and a visible next step at every stage.

EASY TO FILE

From scattered details to a reviewed summary.

CHECK
